

Fall-Proof Your Home: Safety Tips for Seniors

Preventing falls keeps elders safe, independent, and confident at home.

Why It Matters

- Falls are the leading cause of injury and hospitalization among seniors.
- One serious fall can lead to fractures, loss of mobility, or long-term dependence.
- Simple home adjustments and guided care can dramatically reduce fall risk.

Practical Tips

1. Clear walkways — remove loose rugs, cords, and clutter.
2. Install grab bars — in bathrooms, near stairs, and beside beds.
3. Improve lighting — add night lights in hallways and bathrooms.
4. Use non-slip footwear — avoid slippery socks or sandals.
5. Ensure stable furniture and keep essentials within easy reach.
6. Encourage balance & strength exercises — supervised by a physiotherapist or caregiver.

Who Needs This

- Seniors with weakness or balance issues.
- Anyone who has had a previous fall or fracture.
- Elders with chronic illnesses such as stroke, diabetes, or heart disease.
- Seniors on medications causing dizziness.
- Those living alone without immediate assistance.

How Narpavi Homecare Can Help

- Home safety assessments to identify fall hazards.
 - Mobility support and safe transfers by trained caregivers.
 - Physiotherapy & strength training to improve balance.
 - Emergency response readiness in case of a fall.
-  Call 9790016097 for a free consultation and safety assessment.
