

BiPAP / CPAP & Oxygen Therapy Safety Guide — Chennai Edition

Why Safe Respiratory Support Matters

Patients with **COPD, sleep apnea, neuromuscular weakness, post-ICU respiratory issues** often need **BiPAP, CPAP, or oxygen concentrators** at home. Without proper setup and monitoring, there's risk of **poor ventilation, infection, fire hazards, and readmission**.

Setup & Safety Checklist

- Correct mask size & fit
- Oxygen concentrator serviced & filters clean
- BiPAP/CPAP pressure verified by doctor
- Spare mask & tubing ready
- Power backup if machine stops
- Room well-ventilated, away from open flames

Daily Care Tips

1. **Hand Hygiene** before touching masks/tubing.
2. Inspect skin for redness/pressure marks.
3. Clean mask & tubing daily; replace filters as advised.
4. Check water levels in humidifier chamber.
5. Monitor **SpO₂ & breathing comfort** daily.

Red Flags

- Increasing breathlessness, chest pain
- Excessive dryness, nosebleeds, headaches
- Fever, cough with secretions
- Machine alarms frequently

 Call **9790016097** for immediate nurse support or doctor review.

Why Choose Narpavi Homecare

- Respiratory-trained nurses, safe titration, infection control.
- 24×7 emergency escalation & equipment backup.
- Digital vitals logs & NRI-friendly updates.
